

**PRECINCT 2 – Agro Processing**

The Agro-processing is the transformation of agricultural produce into a different physical or chemical state. It involves various technical and mechanical processes that range from packaging to the transformation of raw material into final products.

Agro Processing sector aims to stimulate the high-speed growth rate and affords opportunity to achieve improved agricultural profits. The Precinct is vital part for development that has potential to create sustainable employment up / down streams through integrated Agri Parks farming facilities. Sector range from: bio-fuels, forestry & wood, dalry products meat, vegetables, fruits, hides, hive development etc

**PRECINCT 1 – Logistics and Cross Docking**

Cross-docking is a logistics strategy that keeps supply chains moving in a productive and effective manner. In this practice, cargo is immediately unloaded from an incoming container and then loaded directly to an outbound carrier.

The cross-docking facility at the Maluti-A-Phofung Special Economic Zone will allow its investors to expedite shipments to their customers, which means that the customers will get what they want when they want it — the goal of an optimized supply chain. A few of the industries that especially benefit from this method, include:

- Perishable goods, foods and beverages
- Inbound supplier components and raw materials
- Already packed and sorted products, parcels

The Cross-Docking precincts provide solution to easy access to the major cities in surrounding provinces of Free State as a centered business hub as well as neighboring countries.

**PRECINCT 3 – Light Industrial**

The light industrial precinct is a section of the economy's secondary industry and is characterized by less capital-intensive and more labor-intensive operations. Products made in this precinct will be targeted toward end consumers rather than other businesses, consumer electronics and clothing manufacturing are examples of light industry goods. Its operations are open to prospects for major supply and business processes, to attract high tech investments which will compete in global spheres. The sector provides services such as generics, cosmetics, natural remedies, medicinal plants (Herbs), software engineering etc.

**PRECINCT 4 - Heavy Industrial**

Operations in the heavy industry precinct are characterized by capital-intensive and less labor-intensive operations. Investors located in this precinct will usually manufacture large products often bought by other manufacturing companies for the production of their own goods.
